This guide provides instructions for professional installers to mount and install the TLP Pro 525M to a wall or glass surface using the SMK 1 mounting kit. The kit consists of:

- (1) SMK 1 plastic enclosure with an adhesive patch on the back (see figure 1)
- (4) M3 screws, 6 mm
- (1) Cover overlay
- (1) Flat Ethernet cable (10 feet [3 meters]) with RJ-45 connectors

### SMK 1 Features

- (4) Cable knockouts (see figure 1)
- (4) Dimples for wall or furniture mounting holes
- (4) Mounting points for the TLP Pro 525M mounting plate

### Before Starting

Remove one or more knockouts (see figure 1, A) from the SMK 1 enclosure to run cables to the back of the TLP Pro 725M. You may need to use a sharp knife to cut the plastic holding the knockout in place.

### Attach the SMK 1 to a Flat Surface

#### Option 1: Mounting the SMK 1 to a Wall with Fasteners

To mount the SMK 1 to a wall or furniture:

1. Drill holes through the four dimples in the plastic (see figure 1, B) and into the mounting surface.
2. Attach the SMK 1 to the mounting surface, using screws (not provided) that are appropriate for the mounting surface. Do not overtighten the screws or the SMK 1 may be damaged.

#### Option 2: Mounting the SMK 1 to a Glass Surface

1. Clean both sides of the glass with a lint-free cloth and a 1:1 mixture of isopropyl alcohol and water.
2. On the outside glass surface, use a strip of painter's tape to mark the position of the SMK 1 bottom edge (see figure 2, 1). Use a level (2) to ensure it is at the correct angle.
3. Remove the plastic backing from the adhesive patch on the back of the SMK 1.

#### TIP: Wet your fingers to prevent them from sticking to the adhesive patch.
4. Hold the SMK 1 at a slight angle with the top tilting forward and carefully align the bottom inner edge of the SMK 1 with the painter's tape (see figure 3, 1).

5. Press the SMK 1 firmly against the glass surface.

6. Remove the painter's tape.

7. (Optional) The rear overlay cover can be applied to the inside glass surface (2) to hide any air bubbles that were trapped between the SMK 1 and the outside glass surface.
   a. Remove the paper backing from the cover overlay.
   TIP: Wet your fingers to prevent them from sticking to the adhesive patch.
   b. Center the cover overlay behind the SMK enclosure.
   c. Use a credit card or similar flat edge to remove any air bubbles.

Mounting the TLP Pro 525M

**ATTENTION:**
- Do not power on the touchpanels until you have read the Attention in the Power supply section of the TLP Pro 525, 725, and 1025 Series User Guide.

1. Run the provided flat Ethernet cable from a Power over Ethernet injector to the SMK 1 (see the TLP Pro 525, 725, and 1025 Series User Guide). Pass the cable through the touchpanel mounting plate.

2. Fasten the mounting plate to the SMK 1 using the four M3 screws provided (see figure 4, 3). Use the holes, marked WALL, closest to each corner of the mounting plate. Ensure the cable passes through the gap left by removing the knockout (see Before Starting on the previous page).

3. Attach the cable to the LAN/PoE input on the TLP Pro 525M rear panel (see the TLP Pro 525, 725, and 1025 Series User Guide).

4. The mounting plate has two hooks (4), one on each of the top corners. Position the TLP Pro 525M so that these hooks fit into the slots at the top of the rear panel of the touchpanel (see the TLP Pro 525, 725, and 1025 Series User Guide).

5. Slide the TLP Pro 525M down slightly so that the hooks are seated securely in the slots.

6. The tongue at the bottom of the mounting plate (5) sits in the groove in the bottom of the touchpanel (see inset, 6). Fasten the touchpanel to the mounting plate by tightening the lock screw (7).
