

Extron USPA-VGA Universal Sync Processing Adapter

Setting the Sync Polarity DIP Switch

- When DIP switch 1 is set to Follow, output sync polarity is the same as input sync polarity. It doesn't matter how switches 2 and 3 are set.
- When DIP switch 1 is set to Force, horizontal (H) and vertical (V) output sync polarities (+ or -) are set according to how switch 2 (H) and switch 3 (V) are set.
